

ESOF 322 - Homework 4

Nathan Stouffer and Kevin Browder

October 2, 2019

Exercise 1

Part A

Part B

Exercise 2

Part A

Question: How did you upload the ESOF 322 files into your Github account?

Solution: I began by navigating to the esof-322 directory on my computer. I then created a local repository on my computer using the "git init" command. I then staged all the subdirectories in esof-322 for a commit. Next, I committed those files with the commit message "initial commit". Then, on my GitHub account, I created a repository called esof-322. Finally, I set up the online repository as the remote for my local repository and pushed my initial commit.

Part B
